Skills Printing

Can you Design and create a cushion inspired by the Sea?

Make your own fabric cushion using a range of new and exciting techniques. You will discover Heat Transfer printing and apply this to your fabric.

You will create a customer Profile, to find out who your End user is and you will understand why it is important to consider their requirements.

You will think about:

Who your cushion is for? Why are you creating it? Where will it be used and how will you manufacture this product?

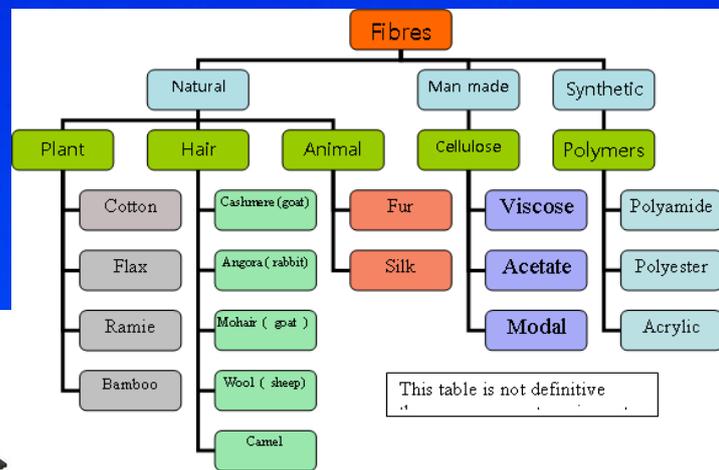

Sea Pollution – The FACTS:

100,000 marine mammals and turtles and 1 million sea birds are killed by marine plastic pollution annually

Plastic is the most common element that is found in the ocean. It is harmful to the environment as it does break down easily and is often mistaken as food by marine animals.

There is more micro plastic in the ocean than there are stars in the Milky Way.

What materials?
