I will be able to:

- Compare Britain in 1750 with Britain in 1900
- To investigate different aspects of Britain in 1750
- To evaluate some of the inventions from the Industrial Revolution.
- To be able to analyse sources to find out what conditions were like in the factories.
- To compare the less desirable jobs from the Industrial Revolution and today
- To describe and explain the living conditions experienced by people who moved to the cities
- Consider the evidence to decide whether Davison intended to kill herself

Assessment: City Life During the Mid 1800s - source work

Britain during 17508

- 80% of people worked in the countryside. London was the only city with more than 10,000 people.
- The triangular trade in enslaved Africans was at its height. Sugar, tobacco and cotton plantations in the Caribbean and North America were bringing huge profits to Britain's businesses and banks. Some of this was invented in entrepreneurs and inventors at the time of the Industrial Revolution.
- Only a few wealthy men could vote and CofE religion was very important.
